

Lightning Switch®

Asst. U.S. Secretary of Housing and Urban Development Demonstrates Lightning Switch® at the 2007 International Builders' Show

Dr. Darlene F. Williams, HUD's Assistant Secretary for Policy Development and Research, punctuated her presentation at the 2007 International Builders' Show in Orlando by demonstrating the Lightning Switch® for industry officials and other attendees.

This quotation is from a transcript of her prepared remarks describing technologies chosen for HUD's prestigious Concept Home project. Lightning Switch was at the top of the list.

Demonstrating the Lightning Switch at IBS 2007*

“... Concept Home Omaha demonstrates a vision for the future of housing that is flexible, efficient and sustainable.

“Some interesting examples of cutting edge technologies include:

“PulseSwitch Systems’ wireless electrical switches, which feature a NASA technology that eliminates batteries and the need to run hard-wired switches from an overhead light or plug receptacles to a wall switch. What’s more – homeowners can easily set up the switches in whatever setup fits the way they use their home. These switches will be used throughout the Concept Home and add to the flexibility in the open floor plan of the first floor and the flex room upstairs.”
